#### **DETAILED ACTION**

#### Election/Restrictions

Applicant's election of Group I, Claims 1-11 in the reply filed on 9/29/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 1-11 are now under consideration.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 and 5-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Matsumura et al (US 2002/0189545).

The present Claims generally require heating a substrate to be subjected to film formation, heating a wire to a wire temperature, supplying silane, ammonia and hydrogen, and forming a silicon nitride film.

Matsumura disclose heating a substrate to be subjected to film formation, heating a wire to a wire temperature, supplying silane, ammonia and hydrogen, and forming a

Art Unit: 2812

silicon nitride film as required by present Claims 1, 5, 6, 7 and 8. See page 2, paragraphs 19- 20 and page 9, paragraph 112. Matsumura further discloses a substrate temperature of 200 degrees Celcius and a wire temperature of 2000 degrees Celcius as required by present Claims 2, 3, and 9-10. See page 2, paragraph 20. Therefore, Matsumura et al anticipate Claims 1-3 and 5-10 of the present invention.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 4 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumura et al (US 2002/0189545).

Claims 4 and 11 further require pressures of 10-50 millitorr.

Art Unit: 2812

Matsumura et al is relied upon as discussed above, and disclose pressures of about 0.1 PA to 100 Pa.

Matsumura et al discloses the presently claimed limitations, except for the pressures as required by Claims 4 and 11, 10-50 millitorr.

It would have been obvious for one of ordinary skill in the art, at the time of the invention, to arrive at the presently claimed pressures as the discovery of an optimum value of a result effective variable in a known process is ordinarily within the skill of the art. See *In re Aller*, 105 USPQ 233 (1955) and *In re Antonie*, 195 USPQ 6 (CCPA 1977). In this case the pressure would be considered a result effective variable by one of ordinary skill in the art, and the selection of the optimum parameters would be within the level of skill of one of ordinary skill in the art as simply a matter of optimization.

### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander G. Ghyka whose telephone number is (571) 272-1669. The examiner can normally be reached on Monday through Thursday during general business hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Lebentritt can be reached on (571) 272-1873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
